/note="Vector: pBluescript II KS(+); Site_1: EcoRI;
Site_2: Not!; This normalized library was constructed from
Site_2: Not!; This normalized library was constructed from
I million independent clones. cDNA synthesis was initiated
using an oligo(dT) primer, using methylated C in the first
strand synthesis reaction. Following this first strand
reaction, double-stranded cDNA was blunted, ligated to
NotI adapters, digested with EcoRI, size-selected, and
cloned into the NotI and EcoRI compatible sites of a
custom modified MCS of the pBluescript (Ks)+ vector. The
library was normalized in 2 rounds using conditions
adapted from Soares et al., PNAS (1994) 91: 9228-9232 and
Bonaldo et al., Genome Research 6 (1996): 791, except that
a significantly longer reannealing hybridization was
                                                                                                                                                                  1128

McCarter at Washington University, St. Louis. The cDNA was
made by using pynabead oligo-dT priming (Dynal). DcR based
library using a modified protocol from the SMART PCR cDNA
Synthesis Kit from Clontech. Directionally cloned into the
Williamson of the University of California at Davis
(vmwilliamson@ucdavis.edu)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            HQB37058 505 bp mRNA linear EST 09-JAN-2003 rf37e04.yl Meloidogyne hapla J2 paMP1 vl Meloidogyne hapla cDNA 5' similar to TR:Q9XW31 Q9XW31 Y40H4A.l PROTEIN. //note="Vector: pAMP1 (Gibco); Site 1: NoTi; Site 2: Sall;
The library was constructed by Claire Murphy and Dr. James McCarter at Washington University, St. Louis. The cDNA was made by using Dynabead oligo-dT priming (Dyna)]. PCR based Synthesing a medified protocol from the SMART PCR cDNA Synthesis Kit from Clontech. Directionally cloned into the UDG sites of pAMP1. J2 were provided by Dr. Valerie
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           296
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   356
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           123
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           416
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  183

                                                                                                                                                                                                                                                                                                                               NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Baylor Plaza, Houston, TX 777030, USA
On Nov 15, 2002 this sequence version replaced gi:23812823.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas and whole genome shotgun sequencing reads assembled using Atlas in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html). NOTE: This is a "working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Submitted (17-APR-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

New mammalian histamine H4 receptor proteins and polynucleotides encoding the proteins, useful in gene therapy for treating diseases where it is beneficial to elevate mammalian histamine H4 receptor activity.

Claim 4; Fig 5A; 92pp; English.

The present sequence is that of a cDNA clone encoding a murine histamine receptor of the H4 subtype. The cDNA was isolated from a mouse spleen cDNA library. It shows 72.8% homology to the human H4 receptor coding region. The invention provides mammalian (human, mouse, ra and guinea pig) histamine H4 receptor nucleic acid molecules (see AAI70980-83) and polypeptides (see AAM50564-67). The nucleic acids have been expressed in recombinant host calls that produce active recombinant protein. The pharmacology of known histamine ligands is demonstrated. Mammalian histamine H4 receptor may be used in gene therapy for the treatment of

diseases where it is beneficial to elevate mammalian histamine H4 receptor activity. Recombinant protein is useful for identifying modulators of the mammalian histamine H4 receptor. Such modulators may buseful for diagnosing, treating or preventing asthma, allergy, inflammation, cardiovascular and cerebrovascular disorders, non-insulin dependent diabetes mellitus, hyperglycemia, constipation, arrhythmia, disorders of the neuroendocrine system, stress and spasticity

The present sequence is that of a cDNA clone encoding a rat histamine receptor of the H4 subtype. The CDNA was isolated from a rat spleen CDNA library. It shows 72.54 homology to the human H4 receptor coding region. The invention provides mammalian (human, mouse, rat and guinea pig) histamine H4 receptor nucleic acid molecules (see AA170980-83) and polypeptides (see AAA70986-67). The nucleic acids have been expressed in recombinant host cells that produce active recombinant protein. The pharmacology of known histamine ligands is demonstrated. Mammalian pharmacology of known histamine ligands is demonstrated. Mammalian of histamine H4 receptor may be used in gene therapy for the treatment of diseases where it is beneficial to elevate mammalian histamine H4 receptor activity. Recombinant protein is useful for identifying may be useful for diagnosing, treating or preventing asthma, allergy, useful for diagnosing, treating or preventing asthma, allergy, inflammation, cardiovascular and cerebrovascular disorders, non-insulin

Full-length cDNA (see AA170981) encoding mouse H4 (see AAM50565) was subsequently obtained. The invention provides mammalian histamine H4 receptor nucleic acid molecules and polypeptides. The nucleic acids have been expressed in recombinant host cells that produce active recombinant protein. Mammalian histamine H4 receptor may be used in gene therapy for the treatment of diseases where it is beneficial to elevate mammalian histamine H4 receptor activity. Recombinant H4 receptor protein can be used to identify modulators of activity for use in the treatment of asthma, allergy, inflammation, cardiovascular and cerebrovascular disorders, non-insulin dependent

Full-length cDNA (see AA170981) encoding mouse H4 (see AAPN5065) was subsequently obtained. The invention provides mammalian histamine H4 receptor nucleic acid molecules and polypeptides. The nucleic acids have been expressed in recombinant host cells that produce acids have been expressed in recombinant host receptor may be used in gene therapy for the treatment of diseases where it is beneficial to elevate mammalian histamine H4 receptor activity. Recombinant H4 receptor protein can be used to identify modulators of activity for use in the treatment of asthma, allergy, inflammation, cardiovascular and cerebrovascular disorders, non-insulin dependent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New mammalian histamine H4 receptor proteins and polynucleotides encoding the proteins, useful in gene therapy for treating diseases where it is beneficial to elevate mammalian histamine H4 receptor activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            hyperglycemia, constipation, arrhythmia, disorders of

New mammalian histamine H4 receptor proteins and polynucleotides encoding the proteins, useful in gene therapy for treating diseases where it is beneficial to elevate mammalian histamine H4 receptor activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is that of the forward primer used, with the reverse primer given in AAI70994, in the PCR amplification of mouse spleen cDNA. The coding region (see AAI70981) of mouse histamine H4 receptor cDNA was obtained. The PCR product was cloned into mammalian expression vector polNeo. The invention provides mammalian histamine H4 receptor nucleic acid molecules (see AAI70980-83) and polypeptides (see AAM50564-67). The nucleic acids have been expressed in recombinant host cells that produce active recombinant protein. Mammalian histamine H4 receptor may be used in gene therapy for the treatment of diseases where it is beneficial to elevate mammalian histamine H4 receptor activity. Recombinant H4 receptor protein can be used to identify modulators of activity for use in the treatment of asthma, allergy, inflammation, cardiovascular and cerebrovascular disorders, non-insulin dependent diabetes mellitus, hyperglycemia, constipation, arrhythmia, disorders of the neuroendocrine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Farnesyl transferase inhibitor modulated leukemia associated gene #700.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ss; cytostatic; farnesyl transferase inhibitor; gene expression; quinolinone; leukemia; cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is that of a cDNA clone encoding guinea pig

histamine receptor of the H4 subtype. The cDNA was isolated from a bone

arrow cDNA library. It shows 75.6% homology to the human H4 receptor

coding region. The invention provides mammalian (human, mouse, rat and

coding region. The invention provides mammalian (human, mouse, rat and

coding region. The invention provides mammalian (human, wee ben

expressed in recombinant host cells that produce active recombinant

protein. The pharmacology of known histamine ligands is demonstrated.

Mammalian histamine H4 receptor may be used in gene therapy for the

creatment of diseases where it is beneficial to elevate mammalian

chistamine H4 receptor activity. Recombinant protein is useful for

dentifying wodulators of the mammalian histamine H4 receptor. Such

codulators may be useful for diagnosing, treating or preventing asthma,

allergy, inflammation, cardiovascular and cerebrovascular disorders, non-

insulin dependent diabetes mellitus, hyperglycemia, constipation,

arrhythmia, disorders of the neuroendocrine system, stress and spasticity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New mammalian histamine H4 receptor proteins and polynucleotides encoding the proteins, useful in gene therapy for treating diseases where it is beneficial to elevate mammalian histamine H4 receptor activity.

                                                                                                                                                                                                                                                                      methyl-2-(1H)quinolinone, monitoring the therapy of a patient, treating a patient with leukemia with FTI if the analysis indicates that the patient
                                                                                                                                                                                                                                                                                                corresponds to a gene whose expression may be
                                                                                                                                                                                           The invention relates to a method of determining whether a patient will respond to treatment with a farnesyl transferase inhibitor (FTI), by analyzing the expression of gene that is differentially modulated in the presence of an FTI. The method is useful for determining whether a patient will respond to treatment with a FTI such as (B)-6-[amino(4-chlorophenyl) (1-methyl-1H-imidazo]-5-yl)methyl]-4-(3-chlorophenyl)-1-

The invention relates to an isolated polypeptide encoded by a nucleic acid molecule that is at least 80% identical to the G protein-coupled (GGPCR) polynucleotides included in the specification. Also included are probes based on the GPCR sequences (including antiesnse probes), a host call comprising an expression vector comprising the GPCR sequence.

CC antibodies raised against the polypeptides are useful for cell comprising modulator compounds which function as modulators, activators, identifying modulator compounds which function as modulators, activators, crepressors, against the polypeptides and mucleic acid probes as including the GAL4 polypeptide. The antibodies and nucleic acid probes as confined above can be used to discose and nucleic acid probes as including the GAL4 polypeptide. The antibodies and nucleic acids and are used to discose a variety of disease.

CC discorders in which GPCRs are involved e.g., Alzheimer's disease or discorders in which GPCRs are involved e.g., Alzheimer's disease.

CC discorders in which GPCRs are involved e.g., Alzheimer's disease.

CC arctinoma, breast carcinoma, cardiomyopathy, chondrosarcoma, chronic obstructive pulmonary disease, Crohn's disease, depression, epilepsy, macular degeneration, lymphoma, melanoma, multiple sclerosis, rheumatoid costeoarthritis, schizophrenia, ulcerative colitis, tuberculosis and many other diseases listed in the specification. The probes and antibodies are also useful for diagnosing cognition and memory disease, psoriasis, heumanosis consecues, obesity, diabetes, Alzheimer's disease. Preferably, compounds that decrease or increase the expression of galanin receptor (GAL4) can be used to treat obesity, diabetes, hyperlipidademia and stroke. The their when the present sequence is a novel GPCR polynucleotide of the their work of the present sequence is a novel GPCR polynucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Homo sapiens
```

```
Novel splice variants of human H4 histamine receptor, H4b and H4c, useful for identifying agonists or antagonists of the receptor which are useful for treating multiple sclerosis, asthma, allergy, psoriasis and stroke.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human, H4; histamine receptor; inflammatory bowel disease; psoriasis; atopic dermatitis; stroke; myocardial infarction; migraine; allergy; chronic obstructive pulmonary disease; COPD; cerebroprotective; therapy; rheumatoid arthritis; multiple sclerosis; inflammation; neuroprotective; asthma; receptor; gene; ds.
                                                                                                                                                                                                                                                                                                                The invention relates to splice variants of human H4 histamine receptor, H4b and H4c. The invention is useful for identifying an agonist, antagonist or inverse agonist of a mammalian histamine receptor. The agonist, antagonist or inverse agonist of H4b and H4c is useful for treating inflammation, asthma, allergy, atopic dermatitis, stroke, mycoardial infarction, migraine, chronic obstructive pulmonary disease (COPD), rheumatoid arthritis, multiple sclerosis, inflammatory bowel disease, or psoriasis. The present sequence is human H4c DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1.9%; Score 22; DB 8; Length 1166;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to splice variants of human H4 histamine receptor, H4b and H4c. The invention is useful for identifying an agonist, antagonist of amammalian histamine receptor. The agonist, antagonist or inverse agonist of H4b and H4c is useful for treating inflammation, asthma, allergy, atopic dermatitis, stroke, myocardial infarction, migraine, chromic obstructive pulmonary disease (COPD), rheumatoid arthritis, multiple sclerosis, inflammatory bowel

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          à
                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                    Novel splice variants of human H4 histamine receptor, H4b and H4c, useful for identifying agonists or antagonists of the receptor which are useful for treating multiple sclerosis, asthma, allergy, psoriasis and stroke.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; G protein coupled receptor; GPCR; transmembrane receptor; identification; agonist; screening; therapeutic; pharmaceutical; mutant;
                                                                                                                                                                   The invention relates to splice variants of human H4 histamine receptor,
                                                                                                                                                                                H4b and H4c. The invention is useful for identifying an agonist, antagonist or inverse agonist of a mammalian histamine receptor. The agonist, antagonist or inverse agonist of H4b and H4c is useful for treating inflammation, asthma, allergy, atopic dermatitis, stroke, myocardial infarction, migratine, chronic obstructive pulmonary disease (COPD), rheumatoid arthritis, multiple sclerosis, inflammatory bowel disease, or psoriasis. The present sequence is human H4 receptor DNA
                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human G protein coupled receptor hRUP7 encoding cDNA SEQ ID NO:13
                                                                                                                                                                                                                                                                                                                                                                                                                ;

The present invention describes transmembrane receptors, preferably human grotein coupled receptors (GPCR), for which the endogenous ligand is unknown (orphan GPCR receptors). More specifically the present invention relates to non-endogenous, constitutively activated versions of a human GPCR. These non-endogenous human GPCRs can be useful for the direct identification of candidate compounds as receptors agonists, inverse agonists or partial agonists for use as pharmaceutical agents. AAA46017 to AAA46126 and AAB02825 to AAB02859 represent sequences used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     screening receptor,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           0;
                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is a cDNA encoding hRUP7, an endogenous human orphan G protein-coupled receptor (GPCR). The full length hRUP7 cDNA was cloned BY RT-FCR using human peripheral leucocyte cDNA as template. The orphan GPCR of the invention, like all GPCRs has seven transmembrane alpha helices with an extracellular N-terminus and an intracellular C-terminus. However, no endogenous ligands has yet been identified for the proteins of the invention. The orphan GPCRs may be used in the identification of their endogenous ligands, and to screen potential GPCR agonists and antagonists for use as pharmaceutical agents. The proteins may also be used in the study of GPCR-mediated signalling cascades, and to elucidate their precise role in normal and diseased human conditions. Nucleic acid encoding human orphan GPCRs may be used for tissue localisation expression analysis to provide information about their function in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           G-protein coupled receptor; GPCR; PFI-013; antiallergic; antiasthmatic; antiinflammatory; vasotropic; antidiabetic; anorectic; cytostatic; human;

This cDNA of NCIMB 41073 encodes a human G-protein coupled receptor (GPCR) like polypeptide, designated PFI-013. The PFI-013 protein can be expressed by standard recombinant methodology. Antibodies and modulators of PFI-013 are useful in the manufacture of a medicament for treating of PFI-013 are useful in the manufacture of a medicament for treating allergic disorder, including extrinsic asthma, immunological disorders, such as intrinsic asthma, vasculitic granulomatous disease, interstitial and other pulmonary disease, including chronic obstructive pulmonary disease (COPD), infectious, inflammatory disease, such as inflammatory bowel diseases (COPD), infectious, inflammatory disease, reproduction and sexual diseases, psychotherapeutics, urogenital disease, reproduction and sexual medicine, inflammation, cancer, tissue repair, dermatology, photoageing, skin pigmentation, osteoporosis, cardiovascular, gastrointestinal diseases, allergy and respiratory disease, sensory organ disorders, sleep disorders and hair loss. The PPI-013 protein and nucleic acid are useful in the diagnosis and treatment of the above conditions and also for screening drug candidates for the treatment of diseases associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                signal transduction. The antibodies are also useful for enrichment of eosinophils from mammalian, especially human blood and for detecting the

Novel G-protein coupled receptor polypeptide and polynucleotide for treating cancer, autoimmune, pulmonary, cardiovascular and neurological disorders and for identifying modulators useful for treating asthma.

Claim 2; Page 49-50; 54pp; English.

The invention relates to the human G protein-coupled receptor AXOR35

(AAB73621), to cDNA encoding AXOR35 (AAH24006), and to AXOR35 fragments

CC and variants. Like all G protein-coupled receptors, AXOR35 has 7 putative

CT transmembrane domains and is involved in signal transduction. AXOR35 has

homology and structural similarity with G protein-coupled receptors such

as the human histamine H3 receptor. The invention also relates to

expression vectors and host cells comprising AXOR35 DNA, to recombinant

expression of AXOR35, and to an AXOR35-specific antibody. AXOR35 proteins

concleotides may be used to treat a wide variety of disorders

including bacterial, fungal, protozoal and viral infections, particularly

HIV-1 or HIV-2 infections; palm; cancers; benign prostatic hypertrophy;

diabetes; obesity; anorexia; bullimia; osteoporosis; asthma; allergies;

critarary retention; acute heart failure; hypotemsion; hypertension; angina

critary retention; acute heart failure; hypotension; hypertension;

critarary retention; acute heart failure; hypotension; where mental

cretardation, and dyskinesias, such as anxiety, schizophrenia,

cretardation, and dyskinesias, such as parkinson's disease, Huntington's

critaration, and dyskinesias, such as parkinson's disease, Huntington's

critaration, and byskinesias, and AXOR35 proteins and

cretardation, and byskinesias, and AXOR35 proteins and

cretardation, and byskinesias, and AXOR35 proteins and

cretardation, and byskinesias, and andiate AXOR35 proteins and

cretardation, and byskinesias, and andiate are useful for treating astehma, and inhibiting or promoting the

credicate are useful for treating astehma, and inhibiting or promoting the

credicate are also and antibodies are also

credicated and neurologies, macrophages, eosinophils or neutrophils in

asthmatic lung. AXOR35 proteins, nucleotides are also

useful for diagnosing or determining susceptibility of an individual to a disease via the detection of abnormal levels of protein or mRNA, or via the detection of mutations in the corresponding gene. AXOR35 proteins are CC also useful for inducing an immunological response in a mammal against the above diseases, and for antibody production. AXOR35 nucleotides are CC also useful as diagnostic reagents, in chromosome localisation and tissue cycression studies, and for producing transgenic animals useful in drug discovery. AXOR35-specific antibodies are useful for purifying the AXOR35 protein or fragments thereof, and are also useful for treating conditions associated with the expression of the AXOR35 protein. The present CC sequence represents cDNA encoding human AXOR35

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 1, Application US/08341568

Patent No. 5661021

Patent No. 5661021

APPLICANT: Buchert, Johanna
APPLICANT: Sika-aho, Matti
APPLICANT: Sika-aho, Matti
APPLICANT: Saloheimo, Anu
APPLICANT: Penttila, Marja
APPLICANT: Mannanase enzymes, genes coding for them,
TITLE OF INVENTION: methods for isolating the genes, and methods for bleaching lig
TITLE OF INVENTION: pulps

Clones are derived from the bovine BAC library CHORI-240
(http://www.chori.org/bacpac/bovine240.htm). For BAC library
availability, please contact Pieter de Jong (pdejong@mail.cho.org).
Clones may be purchased from BACPAC Resources
(http://www.chori.org/bacpac/ordering_information.htm). This work
was undertaken as part of the International Bovine BAC Mapping
Consortium (IBBMC) by CSIRO Livestock Industries, Australia and the
British Columbia Genome Sciences Centre, Canada.
                                                prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. Second strand cDNA was prepared with the primer adapter of sequence [5' ASAGARAGATTCHCGAGTTATTAATAATTAATCCCCCCCCCCCC 3']. CDNA was cleaved with XhoI and BamHI. Vector: a modified pBluescript KS(+) after bulk excision from Lambda FLC I."
                                                                                                                                                                                                                                                                                                                                                                             0;
